PRODUCT
OVERVIEW

3 TYPES OF INTEGRATION / ANTENNAS

1. EMBEDDED ANTENNA

Completely integrated into the mass and invisible on the surface, the EMBEDDED antennas blend into the decor with a simple mark on the tabletop.

2. FLAT ANTENNA

FLAT antennas integrate into the surface of table tops, creating a completely flat appearance with a previously unrivalled level of finish.

3. ON TOP ANTENNA

ON TOP antennas are installed simply and quickly by 1 drilling a 3 mm hole in the surface of the table tops.

EASY CLIP™ RANGE

WIRELESS CHARGERS FOR FURNITURE CONNECTED TO THE MAINS

The furniture is connected to the electricity supply via the floor, walls or partitions. A preliminary study is recommended in order to establish a budget for the connection to the mains (making a groove in the floor, installing trunking, etc.) Once installed, the wireless chargers are made available to customers on a «self-service» basis and operate completely independently.

BATTERY PACK™ RANGE

WIRELESS CHARGERS FOR FURNITURE NOT CONNECTED TO THE MAINS

In 80% of cases, the furniture cannot be connected to the electricity supply

- When the furniture is mobile, connection is impossible.
- In some cases, the cost of connection to the mains is higher than the cost of the wireless charger, which is why we offer wireless chargers powered by a battery that can last for several days.
